Date of Birth: 04.05.1994 · Military Service: Completed · Driving License: B

PROFILE

Senior Backend Engineer with 8 years of experience building APIs, event-driven services and data platforms in Python, Node.js and Go on AWS and GCP. Designed the partner-facing REST APIs behind Vestel's Home Connectivity Alliance integration with Samsung, LG and Arçelik, then owned the backend architecture of a platform serving 300K users and 250K connected devices, cutting Cloud Run costs by 75% and BigQuery costs by 50%. Shipped GenAI to production on Vertex AI, including an AI code reviewer the whole team adopted, and work daily with coding agents (Cursor, Claude) while owning the design, review and quality of what ships.

EXPERIENCE

Software Architect | Vestel

2024 – Sep 2026

Turkish home appliances and electronics manufacturer (18 group companies).

- Owned the architecture and technical decisions for ~15 PRD-driven product initiatives in a 14-person engineering team, writing the technical design documents that turned each PRD into architecture, trade-offs and development tasks.
- Designed a multi-cloud data platform with event-driven **Pub/Sub** flows, consolidating device, user and event data from Firebase and AWS S3 into BigQuery for **300K users and 250K connected appliances** (100+ tables, **180 TB**).
- Reduced Cloud Run costs by **75%** (max instances –90%, concurrency 4x) and BigQuery costs by **50%** with a data lifecycle strategy that moved unused data to Cloud Storage.
- Led GenAI adoption on **Vertex AI (Gemini)**: an AI code assistant and **automated code reviewer adopted across the team** that made code reviews **~70% faster**, an internal chatbot and LLM-based report summarization.
- Built **Audience Scope**, a device-based audience segmentation model covering **5M Smart TVs** to estimate advertising revenue potential, developed with coding agents under my design, review and validation.
- Delivered daily-refreshed analytics dashboards for product and device teams tracking feature usage, user activity and firmware adoption.
- Provisioned all infrastructure as code with **Terraform** across test and production environments; mentored 1 intern and 4 junior engineers.

Tech: Python, Go, GCP (Cloud Run, Cloud Functions, Pub/Sub, BigQuery, Firestore, Vertex AI), Firebase, AWS S3, Terraform

Senior Software Engineer | Vestel

2022 – 2024

- Designed and built the serverless backend for Vestel's **Home Connectivity Alliance (HCA)** integration, enabling cross-brand control of connected appliances in both directions with **Samsung, LG and Arçelik**.
- Designed partner-facing **REST APIs** for three core Node.js services (**discovery, status and command**) on AWS Lambda, API Gateway, DynamoDB and S3, documented with **OpenAPI/Swagger**, secured with **OAuth2**, with **webhook** callbacks pushing device status events to partners.
- Met a **~5-second end-to-end latency** target for command and status flows across clouds, from the partner platform to the physical appliance.
- Provisioned infrastructure with AWS CloudFormation, monitored services in CloudWatch and wrote unit tests with Jest.

Tech: Node.js, AWS (Lambda, API Gateway, DynamoDB, S3, CloudFormation, CloudWatch), OpenAPI, OAuth2, PostgreSQL, Jest

Data Engineer | Arzum Small Home Appliances

2021 – 2022

- Set up the data pipeline and refactored its SQL transformations, making internal reporting more reliable; built a monthly sales forecasting model for **120 SKUs** (70–80% accuracy).

Tech: SQL, SPSS

Technology Development Engineer | EnergyPool Turkey

2018 – 2021

French-based energy trading and smart energy management company.

- Developed and maintained two energy trading web platforms with **Django and PostgreSQL on AWS**, plus Python background services ingesting electricity market prices and power plant data.
- Built ML forecasting models end to end, from data extraction to dashboards: **electricity price forecasting at ~92% accuracy**, plant production/consumption at 80–90%.

Tech: Python, Django, PostgreSQL, AWS, QuickSight

- Built a Python network discovery tool that connected over SSH to identify every device on the network by hostname and IP address.

PROJECTS

CloudArchitect-Sim | systemdesignsimulation.com

- Full-stack, **LLM-graded system-design interview trainer**: users draw an architecture on a drag-and-drop canvas, an LLM interviewer scores it on 5 axes and asks follow-ups over up to 3 rounds.
- Built for cost and reproducibility: a deterministic code-only gate before any LLM call, a topology-hash response cache, rate limits and a daily spend cap, plus a golden-set eval harness re-run on every prompt change. Deployed on GCP Cloud Run.

Tech: Next.js, React, Tailwind, Python, FastAPI, Firestore, Cloud Run, LLM APIs

BLEX AI | blexxai.com

- AI photo-to-art app: users pick a photo and a style template, and the image is transformed with **Vertex AI (Gemini 2.5 Flash)**. **Go backend on Cloud Run** with asynchronous job processing, Firestore, Cloud Storage with signed URLs, and Firebase Auth token verification.

Tech: Go, Firebase, Firestore, Cloud Storage, Vertex AI, Cloud Run

SKILLS

Languages: Python, JavaScript / TypeScript (Node.js), Go, SQL

Frameworks: FastAPI, Django, Flask, Next.js, React

APIs & Messaging: REST API design, OpenAPI/Swagger, OAuth2, webhooks, event-driven design (Pub/Sub)

AWS: Lambda, API Gateway, DynamoDB, S3, CloudWatch, CloudFormation

GCP: Cloud Run, Cloud Functions, Pub/Sub, BigQuery, Firestore, Vertex AI, Firebase

Databases: PostgreSQL, DynamoDB, Firestore, MongoDB, BigQuery

AI: Vertex AI (Gemini), LLM integration and evaluation, prompt engineering, AI-assisted development (Cursor, Claude)

IaC, DevOps & Testing: Terraform, CloudFormation, Git branching workflows, Linux, pytest, vitest, Jest

Architecture: Serverless, microservices, distributed systems, IoT / connected devices, cost optimization

CERTIFICATIONS

- Developing Serverless Solutions on AWS – AWS
- Advanced AWS Well-Architected Best Practices – AWS
- AWS Certified Cloud Practitioner – AWS
- TensorFlow Developer · Neural Networks and Deep Learning – DeepLearning.AI

EDUCATION

B.S. in Electrical and Electronics Engineering | Marmara University

2013 – 2018

Erasmus Exchange | Budapest University of Technology and Economics (BME)

Spring 2017

LANGUAGES

Turkish – Native · English – Professional working proficiency (B2)
